LOAD BALANCING LICENCE | HOME
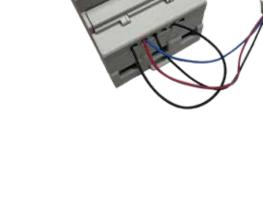

This kit is needed for load balancing in a house. The electricity meter is fitted by an authorised installer/electrician next to the existing meter cabinet. An Ethernet cable (or the equivalent for communication) is taken from the electricity meter and connected to the charging box.

This kit includes a licence for activating load balancing and the electricity meter (Modbus communication).

- 1 electricity meter (max 65 A) including integrated RJ45 contact (must be on the incoming central unit/feed).
- 1 separate RJ45 contact which is connected to the integrated energy meter in the charging box by the electrician.
